CS 321 Homework 1

Robert Detjens

Construct an NFA with three states that accepts the language L.

Suppose that a bank only permits passwords that are strings from the alphabet [abcd123!?\$], etc. Construct a NFA/DFA for L.

A number is divisible by 3 if the sum of its digits is divisible by 3. Construct a DFA M that accepts a base-10 number if it is divisible by 3.

For the DFA M below, give its formal definition as a quintuple. Verbally describe the language, L(M), accepted by M.

Prove that the class of regular languages is closed under complementation. I.E. if L is a regular language then Lbar is also a regular language.
